The Contamination Sensor 1000 (CS 1000) continuously measures solid contamination in hydraulic fluid. Enclosed in a 4-inch diameter case, the CS 1000 utilizes an optical sensor and measures particles in four sizes: >4, >6, >14 and >21 microns. Measurement results can be output as a contamination code according to ISO 4406:1999 or SAE AS 4059(D).

The CS 1000 is designed for connection to hydraulic and lubrication lines with pressures up to 5075 psi (350 bar) and viscosities up to 4635 SUS (1000 cSt). The unit requires that a small flow of oil (between 30 mL/min and 500 mL/min) is diverted for measurement purposes.

The CS 1000 provides the user with a smaller, tougher, and more versatile stationary sensor. It provides instantaneous readings and is able to self-diagnose continuously with error indication via the status LED. The attractive cost-to-performance ratio makes it especially applicable for OEM applications. Online, real-time condition monitoring allows you to have total predictive maintenance.

**Features and Benefits**
- Measures Particles in Four Sizes: >4, >6, >14 and >21 microns
- In-line or Manifold Mounting
- ISO or SAE codes can be output in 4-20 mA analog signal
- Compatible with Standard Mineral Fluids & Phosphate Esters
- Display and Keypad can be rotated (up to 270°)
- Inlet and Outlet Ports are Interchangeable (bidirectional) (without manifold only)
- Recommended recalibration: Only every 2 years

**Description**

The Contamination Sensor 1000 (CS 1000) continuously measures solid contamination in hydraulic fluid. Enclosed in a 4-inch diameter case, the CS 1000 utilizes an optical sensor and measures particles in four sizes: >4, >6, >14 and >21 microns. Measurement results can be output as a contamination code according to ISO 4406:1999 or SAE AS 4059(D).

The CS 1000 is designed for connection to hydraulic and lubrication lines with pressures up to 5075 psi (350 bar) and viscosities up to 4635 SUS (1000 cSt). The unit requires that a small flow of oil (between 30 mL/min and 500 mL/min) is diverted for measurement purposes.

The CS 1000 provides the user with a smaller, tougher, and more versatile stationary sensor. It provides instantaneous readings and is able to self-diagnose continuously with error indication via the status LED. The attractive cost-to-performance ratio makes it especially applicable for OEM applications. Online, real-time condition monitoring allows you to have total predictive maintenance.

**Specifications**

- **Measuring Range:** Display ISO ranges between 9/8/7 and 25/24/23 Calibration within the range ISO 13/11/10 to 23/21/18
- **Contamination Output Code:**
  - Standard: ISO 4406:1999 or SAE AS 4059(D)
  - Optional: ISO 4406:1987; NAS 1638 and ISO 4406:1999; SAE AS 4059(D)
- **Self-Diagnosis:** Continuously with error indication via status LED
- **Inlet/Outlet:** 5075 psi (350 bar) max
- **Connections:** Inlet: ISO 228 G1/4 Threaded  
  Outlet: ISO 228 G1/4 Threaded
- **Sensor Flow Rate:** 30 to 500 mL/min
- **Permissible Viscosity Range:** 32 to 4635 SUS (1 to 1,000 cSt)
- **Fluid Temperature Range:** 32°F to 185°F (0°C to +85°C)
- **Power Supply Voltage:** 9 to 36 VDC residual ripple <10%
- **Accuracy:** +/- ½ ISO class in the calibrated range
- **Power Consumption:** 3 Watt max
- **Electrical Outputs:** 4 to 20mA Analog; 2 to 10 V Analog (option)  
  RS485
- **Electrical Specifications:**
  - 4 to 20 mA Analog output (max burden 330Ω);
  - 2 to 10 V output (min. load resistor 820Ω);
  - Limit switching output (Power MOSFET): max current 1.5A
- **Ambient Temperature Range:** -22°F to 176°F (-30°C to +80°C)
- **Storage Temperature Range:** -40°F to 176°F (-40°C to +80°C)
- **Relative Humidity:** 95%, non-condensing max
- **Seal Material:** Mineral Oil: Viton®  
  Phosphate Ester: EPR
- **Electrical Safety Class:** III (low voltage protection)
- **IP Class:** IP67
- **Weight:** 2.9 lbs (1.3 kg)
- **Mounting Position:** Recommended vertical installation with direction of flow south to north through CS 1000 or manifold block

**NOTES:**
All Models feature an analog electrical output. Additionally, an electrical switching output can be configured to alert the operator about rising falling contamination level.

Viton® is registered trademark of DuPoint Dow Elastomers.
Contamination Sensor

Formerly Known as “TCM - TestMate Series”

Features
- Enables the user to transfer data from CS 1000 to PC
- Enables user to change CS 1000 settings
- Enables user to have real time monitoring & data storage

What's Included
Converter box, 115 VAC to 24 VDC adapter, USB driver, FluMoS software, communication & power cables, case

Features
- For WLAN or LAN transmission of data.
- Addition of data stage capabilities.

Communication cable and power adapter can be ordered individually.

- 000 = Standard
- K = CS Block Kit without AS Sensor
- KAS = CS Block Kit with AS1000 Sensor
- KASD = CS Block Kit with AS3008 Sensor

**NOTE:**

CS 1000 Block Kit

Includes: CS and AS Sensor Connection Cables, 2 Test Points, 2 Microflex hoses, FluMoS Light Software

The Contamination Sensor Block KIT (CS 1000 Block KIT) combines two condition monitoring products, the CS 1000 series (Contamination Sensor) into one plug and play unit. It serves as an on-line measurement of solid contamination and water in hydraulic and lube systems.

Note: Flow control is necessary when utilizing the CS 1000 sensor. Flow must be maintained through the sensor module to ensure accurate readings. Utilization of the CS Block KIT is required to maintain Sensor flow rate range as described in the Technical Specifications (at the left).
Contamination Sensor

CS 1939

The Contamination Sensor CS 1939 is an online fluid sensor for permanent monitoring of particle contamination in fluids.

The cleanliness results are presented according to ISO/SAE classifications.

This instrument combines the latest materials and technologies with proven engineering and provides the user with a compact and robust stationary sensor.

The attractive price/performance ratio makes it particularly advantageous for OEM applications for Condition Monitoring.

Features and Benefits

- Critical machine conditions are identified in early stages
- Continuous monitoring of oil conditions
- Condition-based maintenance planning

Market Applications

- Industrial hydraulic and lubrication systems
- Mobile hydraulics

Specifications

- Measured variables:
  - ISO 4406
  - SAE AS 4059

- Service parameters:
  - Flow (status)
  - Drive (%)
  - Temp (°F) and (°C)

- Installation position: Recommended: vertical direction flow

- Ambient temperature: -22°F to 176°F (-30°C to 80°C)

- Storage temperature range: -40°F to 176°F (-40°C to 80°C)

- Relative humidity: max. 95%, non-condensing

- Seal Material: FPM for CS1939-0 / EPDM for CS1939-1

- Protection class: III (safety extra-low voltage)

- Weight: 2.9 lb (1.3 kg)

- Measuring range: Sensor measures from Class ISO 9/8/7 (MIN) to Class ISO 25/24/23 (MAX) Calibrated in the range ISO 13/11/10 to 23/21/18

- Accuracy: +/-½ ISO class in the calibrated range

- Operating pressure: max. 5075 psi / 350 bar

- Hydraulic connection: Inline or hose connection (A,B): thread G1/4, ISO 228 or flange connection (C,D): DN 4

- Permitted measurement flow rate: 30 to 500 mL/min

- Permitted viscosity range: 32 to 4635 SUS (1 to 1000 cSt)

- Fluid temperature range: 32°F to 185°F (32°C to 85°C)

- Connection, male: M12x1, 5-pole, to DIN VDE 0627 or IEC61984

- Supply voltage: 9 to 36 VDC, residual ripple < 10%

- Power consumption: 3 watts max.

- CAN interface: 2-wire, half duplex

- HSI (Sensor Interface): 1 wire, half duplex

Viscosity (cSt) - Differential Pressure (psi)
The ConditionSensor Interface CSI-C-11 is used to transmit digital sensor signals into a network protocol (HSI TCP/IP or Modbus® TCP), which can be transmitted to a stationary or mobile device via network cable (LAN) or wireless connection (W-LAN). Moreover, the CSI-C-11 is equipped with an internal memory and can be used as a data logger.

At the interface module, up to two sensors can be connected via M12 connector and supplied with power. In addition, the CSI-C-11 is equipped with an Ethernet connector (M12x1 socket), which allows the integration of connected sensors into company networks and control systems (PLC).

### Market Applications
- Construction Equipment
- Agricultural Machinery
- Test Benches
- Industrial Hydraulic Systems
- Combination with Filter Unit
- Power Units
- Any hydraulic system that requires on-line monitoring
- Mobile and Stationary Mining Equipment
- Usable with FluMoS Mobile App

Features and Benefits

■ Provides Local Visibility to the Fluid Condition of Critical Systems.
■ Integrated micro VSD, (Variable Speed Drive), pump/motor provides optimal flow for accurate sensor readings in variable conditions.
■ The HY-TRAX® Manually Controlled Fluid Sampling System allows a user to retrieve ISO cleanliness levels from a reservoir tank or a low-pressure line (<50 psi max).
■ The compact design allows for installations with tight space constraints.
■ The Manual rheostat VSD pump controller is housed in a compact IP 40 enclosure and allows the user to adjust the pump flow for optimal sensor readings.
■ Optional AC adapter allows the unit to operate on 115 VAC 60 Hz. 24 VDC is standard.
■ Rugged design for field use.
■ Viton® seals.
■ Fluid viscosities up to 350 cSt.
■ Flow control valve providing optimal pressure for accurate sensor readings.

Applications

■ Mobile Equipment Technology
■ Surface Mining
■ Construction
■ Monitoring of Oil Cleanliness in Storage Tanks
■ Fleet Services
■ Rail

What’s Included

■ TestMate® Contamination Monitor (TCM)
■ Machined, 6061-T651 aluminum alloy manifold block with anodized surface treatment.
■ Specially designed fitting for mating to pump/motor.
■ Viton® seals.
■ Plugged water sensor port (G3/8)
■ VSD (Variable Speed Drive) Motor Power Supply and Control Cable
■ Water Sensor (TWS-D) Power Supply and Signal Cable (only supplied with optional water sensor (TWS-D))
■ Contamination Monitor (TCM) output signal, USB-B Female Port for use with Windows-Based Computer and FluMoS Software, located on Control Enclosure
■ Contamination Monitor (TCM), output signal, M12x1, 8 pole, Male Port, located on Control Enclosure, for use with PLC or RS485 Communication, analog or digital, 4 - 20 mA is standard, 2 to 10 V is optional
■ Flow control valve
■ VSD (Variable Speed Drive) pump/motor
■ Manual rheostat pump controller
■ IP 40 enclosure
■ Fluid Inlet/Outlet Porting (SAE Size 04 ORB)
■ 24 VDC Power Supply (NC3MP Female Connector)
■ 24 VDC Power Supply with Cord
■ Contamination Monitor (TCM) Power and Signal Cable
■ Water Sensor (TWS-D) M12x1, 5 pole Signal Output Connection, Male Port, located on Control Enclosure
■ Contamination monitor (TCM) power connection, female M12x1, 8 pole located on control enclosure
■ Water sensor (TWS-D) power connection, M12x1, 5 pole Female located on control enclosure

| HY-TRAX® Manual Control Module & VSD Pump/Motor | 15 lbs. (6.8 kg) |
Features and Benefits

- Provides Local Visibility to the Fluid Condition of Critical Systems.
- Integrated micro VSD, (Variable Speed Drive), pump/motor provides optimal flow for accurate sensor readings invariable conditions.
- Designed to be used with Schroeder Industries TestMate® contamination monitor (TCM) and optional water sensor.
- The HY-TRAX® Manually Controlled Fluid Sampling System allows a user to retrieve ISO cleanliness levels from a reservoir tank or a low-pressure line (50 psi max).
- The compact design allows for installations with tight space constraints.
- The Manual VSD pump controller is housed in a compact IP 40 enclosure and allows the user to adjust the pump flow for optimal sensor readings.
- Optional AC adapter allows the unit to operate on 115 VAC 60 Hz.
- Rugged design for field use.
- Viton® seals.
- Fluid viscosities up to 350 cSt.
- Flow control valve providing optimal pressure for accurate sensor readings.
- Manual rheostat control adjusts VSD (Variable Speed Drive) pump speed to adjust for variances in fluid viscosities.
- Machined, 6061-T651 aluminum alloy manifold block with anodized surface treatment.
- Specially designed fitting for mating to pump/motor.
- Viton® seals.
- Plugged water sensor port (G3/8)
- VSD (Variable Speed Drive) Motor Power Supply and Control Cable
- Flow control valve
- VSD (Variable Speed Drive) pump/motor
- Manual rheostat pump controller
- IP 40 enclosure

Fluid Inlet/Outlet Porting (SAE Size 04 ORB)

- 24 VDC Power Supply (NC3MP Female Connector)
- Optional 115 VAC Power Supply with Cord
- Water Sensor (TWS-D) M12x1, 5 pole Signal Output Connection, Male Port, located on control enclosure
- TestMate® Contamination monitor (TCM) power connection, female M12x1, 8 pole located on control enclosure
- Water sensor (TWS-D) power connection, M12x1, 5 pole Female located on control enclosure

What’s Included

For Customers who have a TestMate® Contamination Monitor (TCM)

Hy-Trax®

Telematic Communications Module with Remote Controlled Sampling System

Patent pending

Features and Benefits

- Provides Remote Visibility to the Fluid Condition of Critical Systems.
- Integrated micro VSD, (Variable Speed Drive), pump/motor provides optimal flow for accurate sensor readings in variable conditions.
- This HY-TRAX® Remote Oil Contamination Sensor Package allows remote access via the Internet and smart devices to fluid particle counts, temperature, and percent water saturation levels (optional) displayed on a customizable dashboard. The fluid sampling system collects data and the communications module transmits this data via GSM cellular at scheduled intervals. Users can receive alerts via email when a fluid's ISO contamination code or water saturation level (optional) reaches user defined critical levels. The unit can sample fluid directly from a fluid reservoir or low pressure line (<50 psi).
- The Communications Module automatically controls fluid flow to compensate for viscosity changes due to temperature or fluid type. All data is transmitted through a secure VPN and archived in a protected database in the cloud to allow real-time and historical analysis.
- The HY-TRAX® Communications Module will provide maintenance managers with the visibility and vital information necessary to pro-actively schedule preventative maintenance on local and remote equipment. Maintenance decisions can now be based on accurate and real-time data.
- The communications module components are mounted and housed in a rugged IP 40 enclosure.
- Fluid sampling system standard with Viton® seals.
- Fluid viscosities up to 350 cSt.
- 50 psi (max.) working pressure.
- Flow control valve providing optimal pressure for accurate sensor readings.
- VSD, (Variable Speed Drive), pump/motor providing optimal flow for accurate sensor readings.

Applications

- Mobile Equipment Technology
- Surface Mining
- Construction
- Monitoring of Oil Cleanliness in Storage Tanks
- Fleet Services
- Rail

What's Included

- TestMate® Contamination monitor (TCM)
- Flow Control Valve
- GSM cellular communications
- VSD pump/motor
- Machined, 6061-T651 aluminum alloy manifold block with anodized surface treatment
- TestMate® Contamination Monitor (TCM) Communications/Power Cable
- Specially designed fitting for mating to pump/motor
- Plugged water sensor port (G3/8)
- IP 40 enclosure
- Water sensor (optional)
- 24 volts DC standard with optional 115 VAC Power Supply
- Optional Water Sensor (TWS-D) Communication/Power Cable
- Fluid Inlet/Outlet Porting (SAE Size 04 ORB)

**Telematic Communications Module with Remote Controlled Sampling System**

**Features and Benefits**
- Integrated micro VFC, (Variable Speed Drive), pump/motor provides optimal flow for accurate sensor readings in variable conditions.
- Rugged design for field use.
- Fluid viscosities up to 350 cSt.
- 50 psi (max.) working pressure.
- Flow control valve providing optimal pressure for accurate sensor readings.
- Designed to be used with Schroeder Industries’ communications module and optional water sensor.

**What’s Included**
- Machined, 6061-T651 aluminum alloy manifold block with anodized surface treatment.
- Specially designed fitting for mating to pump/motor.
- Viton® seals.
- Plugged water sensor port (G3/8).
- Flow control valve.
- Contamination Monitor.
- Micro VSD pump/motor.
- Fluid Inlet/Outlet Porting (SAE Size 04 ORB).

---

**HY-TRAX® Fluid Sampling System**

**Manifold with Contamination Sensor and VSD Pump/Motor**

**Features and Benefits**
- Provides Remote Visibility to the Fluid Condition of Critical Systems.
- Integrated micro VSD, (Variable Speed Drive), pump/motor provides optimal flow for accurate sensor readings in variable conditions.
- Designed to be used with Schroeder Industries contamination monitor (TCM - manifold mount version only) and optional water sensor.
- This HY-TRAX® Remote Oil Contamination Sensor Package allows remote access via the Internet and smart devices to fluid particle counts, temperature, and percent water saturation levels (optional) displayed on a customizable dashboard. The fluid sampling system collects data and the communications module transmits this data via GSM cellular at scheduled intervals or on demand. Users can receive alerts via email when a fluid’s ISO contamination code or water saturation level (optional) reaches user defined critical levels. The unit can sample fluid directly from a fluid reservoir or low pressure line (<50psi).
- The Communications Module automatically controls fluid flow to compensate for viscosity changes due to temperature or fluid type. All data is transmitted through a secure VPN and archived in a protected database in the cloud to allow real-time and historical analysis.
- The HY-TRAX® Communications Module will provide maintenance managers with the visibility and vital information necessary to pro-actively schedule preventative maintenance on local and remote equipment. Maintenance decisions can now be based on accurate and real-time data.
- The communications module components are mounted and housed in a rugged weatherproof IP 40 enclosure.
- Fluid sampling system standard with Viton® seals.
- Fluid viscosities up to 350 cSt.
- 50 psi (max.) working pressure.
- Flow control valve providing optimal pressure for accurate sensor readings.
- VSD, (Variable Speed Drive), pump/motor providing optimal flow for accurate sensor readings.

**What’s Included**
- Flow Control Valve.
- GSM cellular communications.
- VSD pump/motor.
- Machined, 6061-T651 aluminum alloy manifold block with anodized surface treatment.
- Specially designed fitting for mating to pump/motor.
- IP 40 enclosure.
- Plugged water sensor port (G3/8).
- Fluid Inlet/Outlet Porting (SAE Size 04 ORB).

---

**HY-TRAX® Telematics Communications Module only operates with TCM’s operating on Firmware 3.0 and 4-20 mA outputs. Older firmware versions will not communicate proper flow rate to the telematics module. Contact factory for more details.**

For Customers who have a TestMate® Contamination Monitor (CS) must be 4-20 mA output.

---

*SCHROEDER INDUSTRIES 51*
Features and Benefits

- Provides remote visibility to the fluid condition of critical systems.
- The HY-TRAX® Remote Oil Contamination Communications Module allows remote access via the Internet and smart devices to fluid particle counts, temperature and percent water saturation levels (optional) displayed on a customizable dashboard. The Communications Module collects and transmits data via GSM cellular at scheduled intervals. Users can receive alerts via email or text when the fluid’s ISO contamination code or water saturation level (optional) reaches user defined critical levels.
- The Communications Module automatically controls fluid flow to compensate for viscosity changes due to temperature or fluid type. All data is transmitted through a secure VPN and archived in a protected database in the cloud to allow real-time and historical analysis.
- The HY-TRAX® Communications Module will provide maintenance managers with the visibility and vital information necessary to pro-actively schedule preventative maintenance on local and remote equipment. Maintenance decisions can now be based on accurate and real-time data.
- The communications module components are mounted and housed in a rugged IP 40 enclosure.

What’s Included

- GSM cellular communications
- IP 40 enclosure
- VSD, (Variable Speed Drive), Motor Controller
- 115 VAC Power Supply

HY-TRAX® Communications Module can be utilized on existing CS installations when the sensor receives adequate pressure (>120 psi) and flow (30-150 mL/min) from the hydraulic system. The CS must have 4-20 mA outputs and Firmware version 3.0.

Reservoir Breather Fluid Sampling Adapter

Features and Benefits

- Drop-in reservoir breather retrofit for fluid sampling provides clean easy access to the reservoir through the existing breather part
- Provides easy fluid quality sampling solution for HY-TRAX® and return ports
- HY-TRAX® adapter kit includes #6 & #4 JIC adapters with 6' connection hoses included
- 24” SS drop tubes can be cut to length
- Standard 6 bolt breather pattern
- Anodized 6061 aluminum breather
- ¾” NPT for breather element

Market Applications

- All applications with a hydraulic reservoir utilizing a 6-bolt mounting connection

Reservoir Mounting Pattern: Fits standard 6-bolt
Supply Port Thread Size: 9/16-18 UN
Return Port Thread Size: 7/16-20 UN
Breather Port Thread Size: ¾” NPT

Fittings: #6 & #4 JIC fittings and 6' supply/return hoses.

Return Tubes: Supplied with 3/8” and ¼” return tubes. Tubes are 24” long and can be shortened if necessary. Housing constructed 6061 anodized aluminum.

RBSA 6 bolt sampling adapter with ¾” NPT breather port. Suction and return ports with ⅜” and ¼” JIC connections, respectively.

Reservoir top view 6 bolt reservoir breather mounting location.
The Contamination Sensor Module (CSM) is an online condition monitoring system for detecting particle contamination in hydraulic and lubrication fluids containing a high proportion of air bubbles. Air bubble suppression is used to dissolve the air bubbles so that they are not detected as particles. Moreover, it is the ideal solution for analyzing the particle content of fluids, independently of the rest of the hydraulic system. As an option, other condition monitoring sensors such as the AS 1000 Series Water Sensor can be incorporated.

**Applications**

- Lubrication systems in paper, steel and energy sectors
- Preventive, pro-active preparation of service/intervals
- Monitoring of component cleanliness on test benches
- Monitoring of oil cleanliness in storage tanks

Basically there are three different possibilities for connecting the CSM to hydraulic and lubrication systems. Select the measuring point according to the type of information the customer requires from the system.

1. **Measuring from tank**
   Indicates the overall condition of the oil. Inlet and outlet of the CSM are connected to the tank near the suction of the main pump.

2. **Measuring from the pressure line before the filter**
   This is the normal location for taking bottle samples. By using the CSM the amount of bottle sampling can be reduced and information on the oil condition is therefore available immediately. This test point is used mostly in lube systems.

3. **Measuring from pressure line after the filter**
   This test point is used in roll hydraulics and the reason for measuring oil after the filter is to ensure that clean oil is always available to the sensitive proportional valves and to other machine parts. Mainly used in roll hydraulics and particularly if customers have had problems with the proportional valves.

**Important!** The pressure should be reduced using a separate valve before the oil goes into the CSM.
## CSM 1000

**Contamination Sensor Module**

Formally Known as “TSU - TestMate® Sensor Unit”

Schroeder Pro Total Fluid Life

The Schroeder Pro: Total Fluid Life is a state-of-the-art portable service unit, designed to provide invaluable, real-time insight into the health of synthetic oils, organic oils, mineral oils, and diesel fuel. This insight helps fluid users make informed decisions with regard to fluid replacement and treatment planning.

**Measured Variables:** ISO Code / SAE Class / NAS Class / TAN-Delta Number (Oil Life) / Saturation Level / Temperature

**Particulate Measurement Standards:** ISO 4406 (≥4(c) / ≥6(c) / ≥14(c) / ≥21(c)) , NAS 1638, SAE AS4059

**Particle Counter Measuring Range:** Maximum ISO Code of 29

**Operating Temperature Range:** 32°F to 122°F

**Fluid Compatibility:** Mineral-based oils, Synthetic oils, Organic oils, Diesel Fuels

**Dimensions (cover closed):**
-(L) 16.2” x (D) 12.7” x (H) 6.7”
(main device; accessory case: (L) 22.6” x (D) 20.9” x (H) 8.0”)

**Environmental Protection:**
- IP67 (cover closed)
- IP54 (cover open)

**Maximum Ambient Humidity:** 97% relative humidity, non-condensing

**Weight:** 20.8 lbs. (9.45kg) (main device; accessory case: 19lbs. [8.6kg])

**Calibration Verification Frequency:** 12 months recommended

**Operating Pressure:** 36.3 psi (2.5 bar) Max.
(5075 psi [350 bar] w/ adapter for pressurized lines)

**System Pressure:** 145 psi (10 bar) Max.

**Permissible Viscosity Range:** 1-320 cSt (1-300 cSt with high pressure adapter)

**Operating Temperature:** 32°F to 122°F

**Fluid Temperature Range:**
- 14°F to 131°F (oils)
- 14°F to 122°F (diesel fuel)

**Pump Type:** Gear

**Duty Cycle:** Continuous

**Connection:** 1604 minimess test points, with 0.6m long 8mm tubing

**Power Supply Voltage:** 115V AC

**Nominal Battery Voltage:** 15.0V DC

**Charge Voltage:** 16.8V DC

**Charge Capacity:** 5.2Ah

**Charge Time:** 2 hours (80%) / 5 hours (100%)

**Run Time:** Up to 6 hours (viscosity dependent)

**Data Transmission:** Internet, USB

---

**Features & Benefits**

- **Laser Particle Counter:** 4, 6, 14, & 21 micron counts displayed as ISO, NAS, & SAE
- **Oil Life Sensor:** gives warning of oil life ending and also helps inform if an oil change is required
- **Water Sensor:** shows relative humidity of oil as % saturation
- **Touch Screen:** allows users to navigate operational functions with ease and analyze data
- **Internal Gear Pump:** with bypass for processing pressurized and non-pressurized vessels

Part of the Schroeder Industries 2030 Initiative
- Schroeder Pro: Total Fluid Life

**Accessory Kit with included items:**

- 120VAC Power Supply (charger)
- Hotplate
- Temperature probe
- Magnetic stirrer
- 100 mm wide funnel
- (2) 100 mL sampling bottles
- Sampling/vacuum pump
- USB memory stick
- (2) stoppers (8mm hole)
- Viscosity cup
- High-pressure device
- (2) solid stoppers
- (2) 500 mL flasks
- Storage compartment for hoses and cables
Measured Variables:
- Particle Differentiation / ISO Code / SAE Class / NAS Class / TAN-Delta Number (Oil Life) / Saturation Level / Temperature

Particulate Measurement Standards:
- ISO 4406 (≥4(c) / ≥6(c) / ≥14(c) / ≥21(c) / ≥38(c) / ≥70(c) / ≥100(c)), NAS 1638, SAE AS4059

Particle Counter Measuring Range:
- Maximum ISO Code of 29
- Accuracy: ±0.5 ISO Code (Minimum concentration ISO MTD 2.8mg/L)

Operating Temperature Range:
- 32°F to 122°F

Fluid Compatibility:
- Mineral-based oils, Synthetic oils, Organic oils, Diesel Fuels

Dimensions (cover closed):
- (L) 16.2” x (D) 12.7” x (H) 6.7”
- (main device; accessory case: (L) 22.6” x (D) 20.9” x (H) 8.0”)

Environmental Protection:
- IP67 (cover closed)
- IP54 (cover open)

Maximum Ambient Humidity:
- 97% relative humidity, non-condensing

Weight:
- 26.5 lbs. (12.0kg) (main device; accessory case: 19lbs. [8.6kg])

Calibration Verification Frequency:
- 12 months recommended

Inlet Pressure:
- 36.3 psi (2.5 bar) Max. (5075 psi [350 bar] w/ adapter for pressurized lines)

System Pressure:
- 145 psi (10 bar) Max.

Permissible Viscosity Range:
- 1-2400cSt (1-300 cSt with high pressure adapter)

Operating Temperature Range:
- 32°F to 122°F

Fluid Temperature Range:
- 14°F to 131°F (oils)
- 14°F to 122°F (diesel fuel)

Pump Type:
- Gear

Duty Cycle:
- Continuous

Connection:
- 1604 minimess test points, with 0.6m long 8mm tubing

Power Supply Voltage:
- 115V AC

Nominal Battery Voltage:
- 15.0V DC

Charge Voltage:
- 16.8V DC

Charge Capacity:
- 5.2Ah

Charge Time:
- 2 hours (80%) / 5 hours (100%)

Run Time:
- Up to 6 hours (viscosity dependent)

Data Transmission:
- Internet, USB

The Schroeder Pro: Total Fluid Health is a revolutionary portable service unit, designed to measure and differentiate particulate contamination, as well as determine oil life, relative water content, and temperature. This real-time insight into the health of synthetic, organic, and mineral oils, as well as diesel fuel, helps users make informed decisions with regard to fluid replacement and treatment planning.

Laser Particle Counter - 4, 6, 14, & 21 micron counts displayed as ISO, NAS, & SAE

Water Sensor - shows relative humidity of oil as % saturation

Internal Gear Pump - with bypass for processing pressurized and non-pressurized vessels

Oil Life Sensor - gives warning of oil life ending and also helps inform if an oil change is required

Touch Screen - allows users to navigate operational functions with ease and analyze data

Digital Imaging - sensor sorts particles into fatigue, cutting, sliding wear, and fiber categories to estimate cause of contamination

Fluid Control Units - Portable Models

Features and Benefits

- Two contamination calibrations in one instrument (reversible)
- ISO 4406:1987; NAS 1638
- ISO 4406:1999; SAE AS 4059(D)
- Saturation and temperature measurement through the built-in AquaSensor (AS 1000)
- Integrated pump for measurement in pressureless reservoirs
- Operation with 24 VDC network adaptor included in scope of delivery
- Data storage capabilities
- Interfaces: 5-pole plug, Bluetooth, USB data port

The FCU1310 combines the advantages of the portable contamination measurement units with the measurement technology of the Contamination Sensor (CS 1000) and AS 1000 Aqua Sensor.

The FCU is a portable service unit and is designed for measurement of solid particle contamination and water saturation in hydraulic systems. It is designed for temporary operation up to a maximum of 30 minute runtime followed by a rest period of 10 minutes and is not intended for continuous operation.

The FCU will measure contamination levels on mineral based hydraulic oils compatible with Viton® seals. The FCU is not compatible with water glycol fluids.

The integrated pump and the hoses with test point connections, which are included with the FCU, allow operation on pressureless reservoirs, control circuits, and high pressure circuits.

General Data:

- **Self-Diagnosis:** Continuously with error indication via status LED and display
- **Measured Value:** ISO code / SAE Class / NAS Class / Saturation level / Temperature
- **Measuring Range:**
  - Display from ISO code 9/8/7 (MIN) to ISO code 25/24/23 (MAX)
  - Calibrated within the range ISO 13/11/10 to 23/21/18
  - Saturation level 0 to 100 % / Temperature -13°F to 212°F (-25°C to 100°C)
- **Accuracy:** ± 1/2 ISO class in the calibrated range / ± 2 % Full scale max.
- **Material of Sealings:** FPM Viton seals
- **Ambient Temperature Range:** 32°F to 113°F (0°C to 45°C)
- **Storage Temperature Range:** -40°F to 176°F (-40°C to +80°C)
- **Dimensions (cover closed):** 9” H x 16” L x 13” D
- **IP Class:** IP50 in operation IP67 closed
- **Weight:** Approx. 29 lbs (13 kg)

Hydraulic Data:

- **Operating Pressure:**
  - IN: -7.25 to 650 psi (-0.5 to 45 bar)
  - OUT: 0 to 7.5 psi (0 to 0.5 bar)
  - with Adapter for Pressure Lines:
    - IN: 217 to 5000 psi (15 to 345 bar)
    - OUT: 0 to 7.5 psi (0 to 0.5 bar)
- **Pressure Max.:** 5000 psi (345 bar) (using included high pressure adapter)
- **Maximum Suction Height:** 39 in (1 m)
- **Permissible Viscosity Range:** 46 to 1622 SUS (10 to 350 cSt)
- **Fluid Temperature Range:** 32°F to 158°F (0°C to +70°C)

Electrical Data:

- **Power Supply Voltage:** 24 VDC ± 20%, residual ripple < 10%
- **Max. Power / Current Consumption:** 100 Watt / 4 A
- **Interface:** Plug connection, 5-pole, male, M12x1 and USB

  - 3 = ISO 4406: 1987 NAS 1638 > 2 µm > 5 µm > 15 µm > 25 µm
  - 3 = ISO 4406: 1999 SAE AS 4059(D) > 4 µm(c) > 6 µm(c) > 14 µm(c) > 21 µm(c)

- **BOX 4**: Housing
  - 1 = for hydraulic and lubrication fluids based on mineral oils
  - 5 = fluids based on mineral oils as well as diesel

- **BOX 5**: Fluids
  - Mineral Oil, Synthetic Esters/PAO, Quintolubric, Cosmolubric (Consult factory for other fluid types.)

- **BOX 6**: Options
  - 4 = with integrated pump

- **BOX 7**: Supply Voltage
  - U = 24 V DC

- **BOX 8**: Integrated
  - AS = AquaSensor (AS 1000 series)

- **BOX 9**: Power Supply Adapter
  - 100 to 240 V AC / 50/60 Hz / 1 Phase, (Europe, USA, Canada, UK, Australia, Japan)

We do not guarantee the accuracy or completeness of this information. The information is based on average working conditions. For exceptional operating conditions, please contact our technical department. All details are subject to technical changes.

**Items supplied with FCU-1310-4-U-AS-1 include:**

- Fluid control Unit FCU 1000
- Power supply AC adapter with connecting cables to supply voltage for Europe, USA/Canada, UK, Australia, & Japan
- Adapter for pressure lines
- Inlet pressure hose with screw connection for 1620 test point, length = 2 meters (approx. 79 inches) in length
- Inlet suction hose, clear, open end, length = 0.3 meters (approx. 12 inches) in length
- Outlet return hose, open end, clear, length 1 meter (approx. 39 inches) in length
- USB Flash Drive

**Accessories:**

- Battery Pack (approx. 5 hours of use) Part No. 3504605
Metallic Contamination Sensor Series
Formally Known as “TMS Metallic Contamination Sensor Series”

Features and Benefits
- Early detection of imminent gear unit damage
- Prevention of expensive plant downtime
- Optimal supplement to optical sensors
- Measurement of metallic particles (ferromagnetic and non-ferromagnetic) > 70 µm
- Measurement result is not affected by air bubbles or liquid contamination in the liquid

Applications
- Gear boxes for wind energy
- Paper machine bearings
- Wind Turbines
- Marine Thrusters
- Industrial Gear Boxes
- Mobile Drive Systems
- Lubricating Systems
- Flushing Systems
- Test Standards
- Pumps

The Metallic Contamination Sensor MCS 1000 is used for measuring and recording metallic wear particles in fluids. An inductive measuring method is used to detect and count the particles and classify them according to their size and metallurgical properties (ferromagnetic/non-ferromagnetic). The MCS 1000 is therefore an ideal tool for the continuous condition monitoring of large industrial gearboxes, pumps or bearing systems, and provides early information on any early-stage damage.

The sensor can be used on its own or in combination with other condition monitoring devices such as vibration monitoring systems.

The MCS 1000 can therefore be easily integrated into condition-based or predictive maintenance approaches and it also helps to prevent unscheduled system downtimes.

Metallic Contamination Sensor Series
Formally Known as “TMS Metallic Contamination Sensor Series”

General Data:
- Ambient Temperature: -40°F to 158°F (-40°C to +70°C)
- Diameter Sensor Cross-section:
  - MCS 13xx: 1/4” (6mm)
  - MCS 14xx: 1/2” (13mm)
  - MCS 15xx: 1” (25mm)
- Protection Class to DIN 40050: IP 67
- Weight:
  - MCS 13xx: ~6.6 lbs (~3kg)
  - MCS 14xx: ~5.6 lbs (~2.5kg)
  - MCS 15xx: ~7.7 lbs (~3.5kg)

Specifications
- Environmental Tests:
  - Vibration test / Shock test: EN60068-2-2 / -2-64 (vibration)
  - Climate test: EN60068-2-52 (salt mist)
- Certification:
  - Wind power: DNV - Renewables Cert.
  - Marine: DNV - Type Approval
- Self Diagnostics:
  - Continuous, with error indication via Status LED and general operational readiness via Device-Ready-LED
  - EN61000-6-4 / -6-2 / -6-9
  - Pulse Magnetic Field Immunity / Voltage Dips
  - FCC – Title 47 CFR Part 15

Hydraulic Data:
- Flow Rate:
  - MCS 13xx: 0.1-2.1 gpm (0.4-8 l/min)
  - MCS 14xx: 0.5-10.6 gpm (2-40 l/min)
  - MCS 15xx: 2.6-52.8 gpm (10-200 l/min)
- Operating Pressure: 290 psi (20 bar)
- Fluid Temperature Range: -40°F to 185°F (-40°C to +85°C)
- Inlet/Outlet (flange connection according to ISO 6162-1):
  - MCS 13xx: SAE 1/2”
  - MCS 14xx: SAE 3/4”
  - MCS 15xx: SAE 1”, SAE 1-1/2”, SAE 2”, SAE 4”
- Permissible Fluids: Hydralic and lubrication fluids based on mineral oils as well as synthetic oils (e.g. poly-pheric fluids – PAO)

External Electrical Data:
- Supply Voltage: 18 - 36 VDC, residual ripple < 10%
- Power Consumption: 5 W max.

Internal Electrical Data:
- Switching Outputs:
  - 1 x Ferromagnetic particles (Fe)
  - 1 x Non-ferromagnetic particles (nFe)
  - OR
  - 1 x Ferromagnetic particles (Fe) + Non-ferromagnetic particles (nFe)
  - 1 x Status Signal
  - OR
  - 1x Alarm signal
  - 1x Status signal
- Alarm Relays Capacity: 1.5 A max.
- RS485 Interface: Physical: 2 wire, half duplex; Protocol: HSI, Modbus RTU
- HSI Interface (proprietary protocol): Physical: 1 wire, half duplex; Protocols: HSI
- Switching Log: Active Low or Active High (adjustable)
- Length of Switching Pulse of Particle Signal: Adjustable, 5 to 200 ms
- Length of Switching Pulse of Alarm Output: Adjustable, 30 to 86, 400 s, or continuously on to Reset
- Ethernet Interface: Physical: 10Base-T / 100Base-TX; Protocols: HSI TCP/IP, Modbus TCP
- CAN Interface: Physical: CAN; Protocol: CANopen
- USB Interface (only for service): Physical: mini USB; Protocol: proprietary

AquaSensor
Formally Known as “TestMate® Water Sensor”

Features and Benefits
- Compatible with hydraulic, lube oils and synthetic and natural esters
- Measures and displays saturation and temperature continuously in real-time
- Measured in saturation percentage, not ppm. This is preferable since it takes into account temperature and viscosity variations (see desired saturation level below)
- Data can be monitored to PC, PLC, etc.
- No calibration necessary for different oils
- Individual configuration (AS 3000 only)
- Flumos Mobile App compatibility (AS 1000 only)

Applications
- Hydraulic systems that are sensitive to water in oil
- Gear boxes
- Injection molding machines
- Turbines

The AS sensors are online saturation and temperature sensors for the monitoring of hydraulic and lubrication fluids accurately and continuously. They measure the water content relative to the saturation concentration (saturation point) and outputs the degree of saturation (saturation level) in the range of 0 to 100% as a 4 to 20 mA signal. A reading of 0% would indicate the absence of water, while a reading of 100% would indicate that a fluid is free water. An integrated thermoelement on the sensor measures the temperature of the fluid in the range of -13°F to 212°F (-25°C to 100°C) and outputs it as a 4 to 20 mA signal.

The AS 3000 has a 4-digit, digital display that shows real-time measured values and allows for parameter adjustments. The digital display may also be rotated/aligned on two axes.

Since the effects of free and emulsified water are more harmful than those of dissolved water, water levels should remain well below the saturation point. However, even water in solution can cause damage and therefore every reasonable effort should be made to keep saturation levels as low as possible. As a guideline, we recommend maintaining saturation levels below 30% in all equipment.

If you have any questions regarding technical details or the suitability of the AS sensors for your application, please contact our sales/technical department.

| 6023102 | (5 pole) with 10m screened cable | Pin 3: Blue |
| | | Pin 4: Black |
| | | Pin 5: Grey |
**Features and Benefits**

- Simple installation parallel to the customer system (Sensor Interface for SMU1200, transfer of the sensor’s own analog and switching outputs) using the magnetic holder or top hat rails.
- High protection class IP67. Installation in a switch cabinet is not necessary.
- Plug & Work unit including the 5m connection cable required for direct connection of the sensors (sensor connections via M12x1 male connectors, no programming necessary).
- Simple keypad operation.

The Sensor Monitoring Unit SMU1200 is a display unit for fluid sensors and is designed to display and store measured data. The following combinations of fluid sensors can be connected directly:

- Contamination Sensor TCM and water sensor TWS-C
- Metallic Contamination Sensor TMS and water sensor TWS-C

**Description**

The Sensor Monitoring Unit SMU1200 is a display unit for fluid sensors and is designed to display and store measured data. The following combinations of fluid sensors can be connected directly:

- Contamination Sensor TCM and water sensor TWS-C
- Metallic Contamination Sensor TMS and water sensor TWS-C

**Usable with FluMoS Mobile App**

- Download and store measured data in real-time using FluMoS Mobile App via Bluetooth connection

**Metric dimensions in ( ).**
Sensor Monitoring Unit

Specifications

- **Ambient Temperature:** 32°F to 131°F (0°C to +55°C)
- **Self diagnostics:** Continuously with error indication on display
- **Display:** LED, 6/4/4-digit, each with 17 segments
- **Topple (according to IEC/EN 60068-2-31):** Drop height 1 in.
- **Storage temperature range:** -40°F to 176°F (-40 °C to +80°C)
- **Relative humidity:** Maximum 95%, non-condensing
- **Weight:** 2 lbs.

**Electrical data:**
- **Supply voltage:** 12 ... 24 V DC (±10%)
  - The SMU must not be used with vehicle supply systems without load dump protection of maximum 30 V DC.
- **Residual ripple:** ≤ 5 %
- **Power consumption:** 15 Watt, 1.25 A max.
- **Accuracy of the real-time clock:** ± 5 s/day / ± 0.5 h/year
- **Clock buffer:** ≈ 20 years
- **Protection rating:** III (safety extra-low voltage)
- **Protection class:** IP 67
- **USB Master port:** USB Type A
- **HSI:** 1-wire half duplex
- **Ethernet interface:** 10 Base-T / 100 Base-Tx

**We do not guarantee the accuracy or completeness of this information. The information is based on average working conditions. For exceptional operating conditions please contact our technical department. All details are subject to technical changes.**

Model Number Selection

**What's Included**
- 1 SMU 1200 series
- 1 USB memory stick
- 1 connection cable 5 pole with flying leads for power supply, L = 5m

**Available Accessories**
- Power supply P55, 100-240 V AC / 50-60 Hz / 1.1 A 24 V DC / 1000 mA, Cable length = 1.8 m, Part no.: 3399939
Features and Benefits

- Cost reduction through lower production failure rates
- Identification and elimination of weak process steps
- Optimization of both internal and external handling processes
- Establishing of cleanliness standards, both internal and external
- Documentation of component cleanliness
- Survey of fluid cleanliness and filtration concepts

The Cleanliness Test Unit (CTU 1000) is designed to determine the technical cleanliness especially present on minor contaminated components. By determining the type, size and quantity of the contamination, quality standards can be checked and documented and the necessary steps towards optimization can be taken.

### Description

- **Overall Dimensions (H x W x L):**
  - CTU10xx: 71 in x 39 in x 35 in (1800 mm x 985 mm x 835 mm)
  - CTU12xx: 71 in x 36 in x 45 in (1800 mm x 910 mm x 1140 mm)

- **Weight:**
  - CTU10xx: ≈ 595 lbs (270 kg)
  - CTU12xx: ≈ 640 lbs (290 kg) with ultrasonic unit
  - CTU10xx: ≈ 685 lbs (310 kg)
  - CTU12xx: ≈ 728 lbs (330 kg) with ultrasonic unit

- **Mounting:** Mobile (mounted on casters)

- **Power Consumption:** 600 W (800 W with ultrasonic)

- **Ambient Temperature:** 59°F to 82°F (15°C to 28°C)

- **Control:** PC-controlled with user-friendly software, rinse options and rinsing volume programmable

### Specifications

- **Material of Cleanroom:** Polished stainless steel
- **Filling with Analysis Fluid:** Via analysis cabinet
- **Max. Load Capacity:**

EasyTest Patch Kit

Features and Benefits
- User-friendly visual analysis of solid contamination
- Compatible with mineral-based hydraulic fluids and lubricants, and petroleum distillates
- Enables solid contaminant quantification and identification
- Provides on-site results in a matter of minutes

Applications
- Perform quick on-site determination of contamination levels of solid particles
- Supplement on-site laboratories
- Use as a tool to demonstrate need for solid contamination mitigation

The Schroeder EasyTest Patch Kit (EPK) provides the necessary tools to determine the level of solid particulate contamination present in a fluid sample. Using the vacuum pump contained in the kit, the fluid sample is drawn through a membrane patch. The residual particulate left on the patch is viewed under a microscope and compared to photos of known contamination levels in the L-2711 Schroeder Contamination Handbook (included).

NOTES:
- Solvent is not supplied w/ the EPK. Recommended solvents include Heptane (99% by GLC), or Isopropyl Alcohol.
- Kit contents are subject to change at the discretion of the manufacturer.

Description

Schroeder: EasyTest Patch Kit (EPK)

7630322

Model Selection + Items Supplied

P/N 7640674

NOTES:
- Solvent is not supplied w/ the EPK. Recommended solvents include Heptane (99% by GLC), or Isopropyl Alcohol.
- Kit contents are subject to change at the discretion of the manufacturer.
Features and Benefits

- Easily performed determination of the absolute water content
- Direct comparison with the values measured in the lab thanks to the absolute water content being output in ppm
- High resolution in the lower measuring range
- Measurement series can be recorded for trend analysis
- Battery can be recharged via USB cable
- Illuminated display

Applications

- Perform quick on-site determination of contamination levels of water
- Supplement on-site laboratories
- Use as a tool to demonstrate need for water contamination mitigation

Description

The WaterTest Kit (WTK) is used for quantitative analysis of the absolute water content in mineral-oil-based lubricating and hydraulic fluids. The absolute water content is a measure of the actual water per volume of fluid. The measurement involves adding two reagents to the contaminated oil. This causes a pressure increase in the measurement cell that is output via the digital display as water content in vol. % or ppm. Time per measurement: only approximately 5 minutes (without sample preparation).

Specifications

General Data:

- Measuring Range: 0.02 to 1%*  
  0.1 to 5%*  
  100 to 1500 ppm* (0.01 to 0.15%)  
  200 to 6000 ppm* (0.02 to 0.6%)  
  *) Measurement error < + 1.8 vol. % FS (full scale)
- Measurement data memory: 10 measurement series of 10 measurements each
- Weight including carry case: 2.7 kg
- Dimensions of carry case: 34 x 28 x 13.5 cm

Hydraulic Data:

- Permitted fluid: Mineral-oil-based lubricating and hydraulic fluid
- Permitted fluid temperature: 158°F (70°C)

Electrical Data:

- Power Supply Voltage: Internal battery rechargeable via USB cable

NOTES:

- Replacement pack consisting of consumables sufficient for 50 tests can be ordered separately.
Schroeder's Trouble Check Plus is an easy to use fluid analysis service that can be utilized as part of any predictive maintenance program.

Schroeder offers two types of sample kits: one for hydraulic fluid (Description: THF P/N: 7624310) and one for water glycol (Description: TWG P/N: 7624741). Refer to the next section for tests performed for each of these kits. Upon receipt of order for any of these part numbers, a sample kit containing a clean sample bottle, blank form, and mailing container is shipped to the customer. After the sample has been taken, the customer simply completes the form and encloses it along with the sample in the mailing container provided. Kits are packaged and sold in lots of 10.

Oil sample reports can be tracked online at: http://www.trackmysample.com/

Customers can create their own personal login and password to view all of their reports in one easy to use interface at: http://eoilreports.com/

Information gained by using this service can help identify potential problems in a hydraulic system at minimal cost to the user. Fluid analysis can provide answers to important questions such as these:

- Do I have the right filtration system in place for efficient contamination control?
- Is the fluid in my system experiencing changes that could negatively impact component life or system performance?

### Particle Count and ISO Codes

Particle contamination is responsible for most of the wear in hydraulic systems. The level of contamination is determined automatically by a laser particle counter. The results are shown as the cumulative counts per milliliter of fluid according to ISO 4406:1999. (For water glycol fluids the patch test photo is used to estimate the ISO code. The current sample ISO code is displayed with the target ISO code. The target is based on the cleanliness level required for the most sensitive component in the system. An increase of 1 ISO digit is considered a caution limit and an increase of two ISO digits is critical. When the target ISO code is exceeded, improvement of the system filtration, elimination of the source of ingression or installation of auxiliary off-line filtration is required.

### Water Content

High water content in oil encourages oxidation, corrosion and cavitation. The Karl Fischer Method in accordance with ASTM D 6304-04a determines the water content, which is displayed in percent (% or ppm). (Water glycol fluids normally have upper and lower limits that are set to manufacturer’s specifications). Graphing results are available on-line. In general, water contents of up to 500 ppm are typically not critical for the operation of hydraulic and lubrication systems. When the water content exceeds approximately 500 ppm, the system should be protected against water penetration and measures should be introduced to extract water from the oil.

### Viscosity

Maintaining the correct viscosity is important for achieving long component service life. Viscosity is reported in centistokes (cSt) @ 40°C and 100°C as per ASTM D 445-04. Typically the limits are based on new oil data. Caution limits are calculated at ±10% new oil viscosity and critical limits at ±15% new oil viscosity. (Water glycol fluids can have limits set similarly but the water content should also be monitored as changes in it also affect the viscosity. The manufacturer should be consulted). Trending graphs are available on-line for all reported results. When large changes in viscosity are detected a partial drain of the affected oil and adding fresh fluid may correct the problem. However in some instances a complete oil change may be required.
Trouble Check Plus Fluid Analysis

Total Acid Number (TAN) *not applicable to Description: THF P/N: 7624310
Oxidation is the primary mechanism of oil degradation. The TAN measures the corrosive acidic by-products of oxidation. TAN results are reported in mg/g KOH (Potassium Hydroxide). Since all hydraulic fluids have some inherent acidic properties any increases in TAN must be compared to the new oil value as a baseline. Typically caution limits are set at +0.6 new oil value and critical limits are set at +1.0 new oil value. Certain application specific fluids may require limits set to manufacturer specifications. The results are graphed along with the limits to clearly show when oil oxidation has increased above acceptable levels. When the TAN has increased above the critical level, the oil should be changed immediately to prevent damage from occurring to your equipment.

Spectrographic Analysis *not applicable to Description: TWG P/N: 7624741
Additive, wear metal and contaminant levels are displayed in parts-per-million (ppm). The oil sample is analyzed for eighteen different elements. The results are also graphically displayed for easy detection of increasing or decreasing levels. The manufacturer blends additives into the oil in different forms and quantities. The additive package varies with the oil type. Wear metals indicate wear on particular components of an individual unit. These metals will indicate a wear problem on the microscopic level (< 8 microns) before the problem can be detected by conventional means. The existence of a wear problem is determined by absolute values of metals, and more importantly, by a relative increase or trend in one or more metals. Contaminants can be an indicator of internal or external contamination. The source and amount can be determined by a comparison with new oil data. Below is a list of additive types, wear metal and contaminant sources.

### Status and Recommendations
Corrective actions are recommended when applicable. The status of the sample is rated in three categories:

- **Normal**
  - System is operating within the parameters established by baseline data & prior samples.
  - System requires no immediate action.

- **Abnormal**
  - System is operating outside of caution limits in one or more areas.
  - System requires scheduled maintenance.

- **Critical**
  - System is operating outside of critical limits in one or more areas.
  - System requires immediate attention.

### Model Number Selection

**Description: THF P/N: 7624310**
Total Conditioning Analysis Kit

**Description: TWG P/N: 7624741**
Water Glycol Kit

NOTES:
Sample kits sold in case lots of 10 pieces. No samples will be processed without completed paperwork supplied with kits.
Features and Benefits

- Simple and user-friendly operation
- Large, full color graphics display
- Quick and independent basic setting by use of automatic sensor recognition
- HMG 2500 can only be used with Schroeder HSI and Schroeder SMART sensors
- Up to 4 sensors and 32 measurement channels can be connected simultaneously
- Sampling rates up to 0.1 ms
- Very large data memory for archiving measurement curves
- Various measurement modes: Normal measuring, Fast curve recording, Long-term measurement
- 2 independent triggers, can be linked logically
- Simple sensor connection with M12x1 push-pull connector
- PC connection: USB and RS 232
- Convenient visualization, archiving and data processing using the HMGWIN software supplied

Automated setting procedures, a simple, self-explanatory operator guide and many comprehensive functions ensure the operator is able to carry out a wide range of measurement tasks within a very short time. This makes the HMG 2500 an ideal companion for employees in maintenance, commissioning and service.

The device is designed primarily to record pressure, temperature and flow rate values, which are the standard variables in hydraulics and pneumatics. For this purpose, special sensors are available. The HMG 2500 recognizes the measured variable, measuring range and the unit of these sensors and automatically carries out the basic device settings accordingly.

In addition to this, the HMG 2500 has a digital input, e.g. for frequency or speed measurement, as well as a virtual measurement channel for the measurement of difference or performance.

Due to the wide range of functions and its simple handling, the HMG 2500 is just as appropriate for users who take measurements only occasionally as it is for professionals for whom measuring and documentation are routine.

The HMG 2500 is designed to accept future upgrades of the device software.
**Function**

- Clear and graphical selection menus guide the operator intuitively to all the device functions available. A navigation pad on the keypad ensures rapid operation.
- The HMG 2500 can monitor signals from up to 4 sensors simultaneously.
- The following sensors can be connected to 3 of these input sockets:
  - 3 analogue sensors (e.g. for pressure, temperature and flow rate) with the special digital HSI interface (Sensor Interface); this means the basic device settings (measured variable, measuring range and unit of measurement) are undertaken automatically
  - 3 analogue sensors (e.g. for pressure, temperature and flow rate) with the special digital HSI interface (Sensor Interface); reference HSI information above
- Frequency measurements, counter functions or triggers for data logging can be implemented via the fourth input socket with one digital input.
- Additionally, the HMG 2500 has a virtual measurement channel which enables a differential measurement or a performance measurement by means of the sensors connected to the measurement channels “A” & “B”.
- All input channels can operate simultaneously at a sampling rate of 0.5 ms (1.0 ms for SMART sensors). For the recording of highly dynamic processes, a sampling rate of 0.1 ms can be achieved.
- The most impressive function of the HMG 2500 is without doubt its ability to record dynamic processes as a measurement curve “online”, i.e. in real-time, and to render them as graphs in the field.
- The data memory for recording curves or logs can hold up to 500,000 measured values per recording. Over 100 of such data recordings in full length can be stored in an additional archiving memory.
- For specific, event-driven curves or logs, the HMG 2500 has two independent triggers, which can be linked together logically.
- User-specific device settings can be stored and re-loaded at any time as required. This means that repeat measurements can be carried out on a machine again and again using the same device settings.
- Measured values, curves or texts are visualized on a full color graphics display in different selectable formats and display forms.
- Numerous useful and easy-to-use auxiliary functions are available, e.g. zoom, ruler tool, differential value graph creation and individual scaling, which are particularly for use when analyzing the recorded measurement curves.
The HMG 2500 communicates with a computer via a USB or RS 232 port. Schroeder offers HMGWIN 2500, the matching software for the HMG 2500, for convenient post-processing, rendering, and evaluation of measurements on a pc. It also enables the HMG 2500 to be operated directly from a computer in real time.

The HMG 2500 is equipped with specially developed software providing for fast data collection and processing. A measurement curve can comprise up to 500,000 measured values. The HMG 2500's measured value memory is capable of storing at least 100 of these curves.

The Schroeder software, CMWIN, is also supplied that allows direct communication with SMART (HSI) sensors connected to the HMG 2500 from your PC.

Some examples of the numerous useful additional functions:

- Transfer and archiving of measurements recorded using the HMG 2500
- Display of the measurements in graph form or as a table
- Zoom function: Using the mouse, a frame is drawn around an interesting section of a measurement curve, which is then enlarged and displayed
- Accurate measurement of the curves using the ruler tool (time values, amplitude values and differentials)
- Individual comments and measurement information can be added to the graph
- Overlay of curves, for example to document the wear of a machine (new condition/current condition)
- Using mathematical operations (calculation functions, filter functions), new curves can be added
- Snap-shot function: Comparable to the function of a digital camera, a picture can be taken immediately of any graph and saved as a .jpg file
- A professional measurement report can be produced at the click of a mouse: HMGWIN has an automatic layout function. Starting with a table of contents, all recorded data, descriptions and graphics and/or tables are combined into a professional report and saved as a .pdf file
- Online function (HMGWIN only): Starting, recording, and online display of measurements (similar to the function of an oscilloscope)
- Change of axis assignment of the recorded measurement parameters in graph mode (e.g. to produce a p-Q graph)
### Technical Data

#### Analog Inputs
- **Input signals**: HSI analogue sensors
- **3 channels M12x1 Ultra-Lock flange sockets (5-pin)**
  - channel A to channel C: HSI SMART sensors
- **Accuracy**: ≤ ± 0.1% FS

#### Digital Input
- **1 channel via M12x1 Ultra-Lock flange socket**: Digital status (high/low)
- **Channel D**: Frequency (0.01 to 30,000 Hz)

#### Calculated channel
- **Quantity**: 1 channel via virtual channel E
- **Sampling rate** (dependent on number of active channels): 0.1 ms, max. 1 input channel
  - 0.2 ms, max. 2 input channels
  - 0.5 ms, all 3 input channels
  - 1.0 ms, for SMART sensors
- **Resolution**: 12 bit
- **Memory**: Min. 100 measurement curves, each with 500,000 measured values
- **Display**: 3.5” color display
- **7-segment display**
- **Interfaces**: 1 USB, 1 serial interface RS 232
- **Safety mark**: EN 61000-6-1 / 2 / 3 / 4
- **Safety**: EN 61010
- **IP class**: IP 40
- **Ambient conditions**
  - **Operating temperature**: 32°F to 122°F (0°C to 50°C)
  - **Storage temperature**: -4°F to 140°F (-20°C to 60°C)
  - **Relative humidity**: 70%, non-condensing max
  - **Weight**: approx. 2.43 lb (1.1 kg)

### Order Details

#### Model Code
- **Description**: HMG 2500 - 000 - US
- **P/N**: 925295

#### Operating manual and documentation
- **US = English**

#### Scope of delivery
- HMG 2500
- Power supply for 90 to 230 V AC
- Operating Instructions
- Data carrier with USB drivers. HMGWIN software
- USB connector cable

#### Accessories
- Additional accessories, such as electrical and mechanical connection adapters, power adapters, etc. can be found in the “Accessories for HMG Series” catalog pages.
Features and Benefits

- Large, full graphics color display 5.7” touch screen
- Capable of recording up to 38 sensors at once, 8 analog, 2 digital sensors and 28 HSCI sensors via CAN bus
- Up to 100 measurement channels can be depicted simultaneously
- High-speed measuring rate, up to 8 sensors at 0.1 ms at a time
- Rapid and automatic basic setting of the device by means of automatic sensor detection
- Analog inputs 0..20 mA, 4..20 mA Voltage 0..50V, -10..10 V
- PT 100/1000 input
- Connection to a CAN bus system (also J1939)
- Simple and user-friendly operation, intuitive menu
- Very large data memory for archiving measurement curves enables the storage of 500 measurements with up to 8 Million measured values
- Various measurement modes: Measuring, Fast curve recording, Long term measurements
- Recording of dynamic processes “online” in real time
- Event-driven measurements with several triggering options
- PC interface via USB
- USB Host connection for USB memory sticks
- Convenient visualization, archiving and data processing using the HMGWIN software

The HMG 4000 hand-held measuring unit is a portable measuring and data logging device. It was mainly developed for all values measured in relation with hydraulic systems, such as pressure, temperature, flow rate and position. Moreover, it provides a very high flexibility, even when it comes to evaluating other measuring values. The main applications are servicing, maintenance or test rigs.

The HMG 4000 has a very easy-to-operate user interface due to its large 5.7” touchscreen. The operator can access all of the unit’s functions and settings by means of clearly presented selection menus.

The HMG 4000 can record the signals of up to 38 sensors at once. For this purpose, Schroeder Industries offer special sensors, which are automatically detected by the HMG 4000 and whose parameters such as measurement values, measuring ranges and measuring units can be set.

On the one hand, there are the HSI Sensors (Sensor Interface) for the measurement of pressure, temperature and flow rate, for the connection of which there are 8 analog input channels. Furthermore, there is the option of connecting Schroeder SMART sensors to these inputs. SMART sensors can display several different measured variables at a time.

Up to 28 special HCSI-Sensors (CAN Sensor Interface) can be connected additionally via the CAN bus Port, also supporting automatic sensor detection.

HMG 4000 can optionally be connected to an existing CAN network. This enables the recording of measured data transmitted via CAN bus (e.g. motor speed, motor pressure) in combination with the measured data from the hydraulic system.

The device also offers measurement inputs for standard sensors with current and voltage signals.
The HMG 4000 rounds off the application, providing two additional digital inputs (e.g. for frequency or rpm measurements).

The most impressive feature of the HMG 4000 is its ability to record the dynamic processes of a machine in the form of a measurement curve and render them as a graph — and, moreover, online and in real-time.

Schroeder software HMGWIN which is specific to the HMG 4000, is supplied for convenient postprocessing, rendering and evaluation of measurements on your computer.
Clear and graphical selection menus intuitively guide the operator to all the device functions available and ensure fast implementation.

HMG 4000 can detect the signals of up to 38 sensors simultaneously. 11 Push-pull M12x1 input sockets are available as sensor interfaces. Apart from the push-pull sensor connection cable, M12x1 standard cables can also be used.

The following sensors can be connected to 8 of these input sockets:

- 8 analogue sensors (e.g. for pressure, temperature and flow rate) with the special digital HSI interface (Sensor Interface); this means the basic device settings (measured variable, measuring range and unit of measurement) are performed automatically.
- 8 standard analog sensors with current and voltage signals
- 8 condition monitoring sensors (SMART sensors), the basic device settings are also performed automatically.

The blue input socket provides 2 digital inputs, i.e. for 1 or 2 speed sensors (2nd speed sensor connection via Y adapter). Frequency measurements, counting functions or triggers can as well be implemented for data recording.

Different CAN bus functions can be utilized via the red input socket.

- Connection of up to 28 HCSI sensors (CAN Sensor Interface) by setting up a CAN bus with HCSI sensors and the relevant connection accessories, also with automatic parameterization.
- Connecting to a CAN bus, you have the option of evaluating up to 28 CAN messages
- Configuration of CAN Sensors, the parameterization is performed by means of EDS files, which can be stored and administrated in the HMG 4000

The yellow input socket serves as the interface for pressure, temperature or level switches with I/OLink as well as for the programming device HPG P1. These devices can be parameterized by means of the HMG 4000.

The most impressive function of the HMG 4000 is its ability to record dynamic processes “online”, i.e. in real-time, as a measurement curve and to render them as graphs. During the recording process of a measuring curve, you can zoom in the curve sections of interest using gestures on the touchscreen.

For the purpose of recording highly dynamic processes, all 8 analog input channels can be operated simultaneously at a measuring rate of 0.1 ms.

The data memory for the recording of curves or logs can memorize up to 8 million measured values. At least 500 of such data recordings in full length can be stored in an additional archiving memory.

For the targeted event-driven curve or log recording, the HMG 4000 has two independent triggers which can be linked together logically. In addition, there is a “start/stop” condition, by means of which a measurement can be initiated or finished.

User-specific instrument settings can be stored and re-loaded at any time as required. This means that repeat measurements can be carried out on a machine again and again using the same device settings.

Measured values, curves or texts are visualized on a full-graphics color display in different selectable formats and display forms.

Numerous useful and easy-to-use auxiliary functions are available, e.g. zoom, ruler tool, differential value graph creation and individual scaling, which are particularly for use when analyzing the recorded measurement curves.

The communication between the HMG 4000 and a PC is performed via the built-in USB port.

A HMG 4000 connected to your PC is recognized and depicted as a directory by the PC. You can conveniently move measured data to your PC. Optionally, data transfers can be carried out via a file manager by means of a USB memory stick.
The PC software HMGWIN is also supplied with the device. This software is a convenient and simple package for analyzing and archiving curves and logs which have been recorded using the HMG 4000, or for exporting the data for integration into other PC programs if required. In addition it is also possible to operate the HMG 4000 directly from the computer. Basic settings can be made, and measurements can be started online and displayed directly on the PC screen in real-time as measurement curves progress.

HMGWIN can be run on PCs with Windows 7, Windows 8.1 as well as Windows 10 operating systems.

*) SMART sensors (Condition Monitoring Sensors) are a generation of sensors which can provide a variety of different measurement variables.

Some examples of the numerous useful additional functions:

- Display of the measurements in graph form or as a table
- Zoom function: Using the mouse, a frame is drawn around an interesting section of a measurement curve, which is then enlarged and displayed
- Accurate measurement of the curves using the ruler tool (time values, amplitude values and differentials)
- Individual comments and measurement information can be added to the graph
- Overlay of curves, for example to document the wear of a machine (new condition/current condition)
- Using mathematical operations (calculation functions, filter functions), new curves can be added
- Snap-shot function: Comparable to the function of a digital camera, a picture can be taken immediately of any graph and saved as a .jpg file
- A professional measurement report can be produced at the click of a mouse: HMGWIN has an automatic layout function. Starting with a table of contents, all recorded data, descriptions and graphics and/or tables are combined into a professional report and saved as a .pdf file
- Online function (HMGWIN only): Starting, recording, and online display of measurements (similar to the function of an oscilloscope)
- Change of axis assignment of the recorded measurement parameters in graph mode (e.g. to produce a p-Q graph)

---

**Technical Data**

### Analog Inputs

- Input signals: 8 channels M1x2 Ultra-Lock flange sockets (5 pole) channel A to channel H
- HSI analogue sensors
- Voltage signals: 0.5 .. 4.5 V, 0 .. 10 V etc. (input ranges for 0 .. 50 V, 0 .. 10 V, 0 .. 4.5 V, -10 .. 10 V)
- Current signals: 4 .. 20 mA, 0 .. 20 mA (input range 0 .. 20 mA)
- PT 100 / PT 1000 on Channel H
- Accuracy: ± 0.1 % for HSI, voltage, current
- ± 1 % for PT 100 / PT 1000

### Digital Inputs

- Input signals: 2 channels via M1x2 Ultra-Lock flange socket (5 pole) Channel I, J
- Digital status (high/low)
- Frequency: 0.01 to 30,000 Hz
- PWM duty cycle
- Durations (i.e. Period length)
- Level: Switching threshold / switch-back threshold: 2 V/1 V Max input voltage: 50 V
- Accuracy: ≤ ± 0.1 %

### CAN

- Input signals: 28 channels M1x2 Ultra-Lock flange socket (5 pole) channel K1 to K28
- HCSI sensors, CAN, J1939, CANopen PDO, CANopen SDO
- Baud rate: 10 kbit/s to 1 Mbit/s
- Accuracy: ≤ ± 0.1 %

### Calculated channels

- Quantity: 4 channels via virtual port L (channel L1 to channel L4)
## Technical Data

### Programming interface
- For O-Link devices: 1 channel via M12x1 Ultra-Lock flange socket (5 pole)

### Voltage supply
- Network operation: 9 to 36 V DC via standard round plug 2.1 mm
- Battery: Lithium-Nickel-Kobalt-Aluminum-Oxide 3.6 V, 9300 mAh
- Battery charging time: approx. 5 hours
- Service Life:
  - without sensors: approx. 11 hours
  - with 2 sensors: approx. 9 hours
  - with 4 sensors: approx. 7 hours
  - with 8 sensors: approx. 4 hours

### Display
- Type: TFT-LCD Touchscreen
- Quantity: 5.7”
- Resolution: VGA 640 x 480 Pixel
- Backlight: 10 to 100% adjustable

### Interfaces
#### USB Host
- Plug-in connection: USB socket, Type A, screened
- USB Standard: 2.0 (USB Full speed)
- Transmission rate: 12 Mbit/s
- Voltage supply: 5 V DC
- Power supply: 100 mA max.
- Protection: short circuit protection to GND (0 V)

#### USB Slave
- Plug-in connection: USB socket, Type B, screened
- USB Standard: 2.0 (USB High speed)
- Transmission rate: 480 Mbit/s
- Voltage supply: 5 V DC
- Power supply: 100 mA max.
- Protection: short circuit protection to GND (0 V)

### Memory
- Measured value memory: 16 GB for min. 500 measurements, each containing 8 Million measured values

### Technical Standards
- Safety: EN 61010
- IP class: IP 40

### Ambient conditions
- Operating temperature: 32°F to 122°F (0°C to 50°C)
- Storage temperature: -4°F to 140°F (-20°C to 60°C)
- Relative humidity: 70%, non-condensing max
- Dimensions: approx. 11.22 x 7.44 x 3.43 in (B x H x T)
- Weight: approx. 4.08 lb (1.85 kg)
- Housing material: Plastic (Elastollan® R 3000 - TPU-GF)

### Model Code
- Description: HMG 4000 - 000 - US
- P/N 925283

### Scope of delivery
- HMG 4000
- Power supply for 90 to 230 V AC
- Strap
- Operating manual and documentation
  - US = English
  - Operating Instructions
  - Data storage medium containing USB drivers HMGWIN and CMWIN software
  - USB connector cable

### Order Details
Additional accessories, such as electrical and mechanical connection adapters, power adapters, etc. can be found in the “Accessories for HMG Series” catalog pages.

**Note:** The descriptions and part numbers are subject to change. Always consult the latest manufacturer's documentation for the most accurate information.
Features and Benefits

- Easy to use—for beginner or experienced troubleshooters
- Large meters are clearly marked with easy-to-read scales
- Scale selector switches and the load valve control knob are also large and specially designed to be easy to grip under any conditions
- All loose components are stowed in form-fitting recesses in the impact resistant plastic case that also protects the meters and circuitry
- The electronic sensor and the EasyTest fitting are the only components that see hydraulic fluid, so clean-up is limited to draining the sensor and replacing the cap on the EasyTest fitting
- The load valve allows the operator to simulate operating pressure, if required

Schroeder's original TestMate® system with the patented EasyTest fitting provides the hydraulic user with a quick, convenient method to test, troubleshoot, and obtain preventive maintenance data on hydraulic systems. Flows up to 100 gpm and pressures up to 6000 psi, as well as operating temperature, are measured through an EasyTest fitting, which is permanently installed in the hydraulic system.

The sensor and EasyTest fittings are robust units designed to operate safely at any system pressure up to the maximum 6000 psi that the sensor load valve is capable of generating. Pressure bearing parts are thick section aluminum extrusions carefully chosen for their combination of high strength and light weight.

If the system's prime mover is kept at constant rpm, any drop in indicated flow will represent a loss of system efficiency at the point of test. During testing, system operation can be used to create the load, or the load can be simulated with the load valve in the sensor block.

The electronic circuitry produces data that accurately reflects system performance at each test point throughout the operating pressure range, making it possible to also determine pump and motor efficiency as well as valve and cylinder leakage.

- Check systems before and after rebuild
- Use as part of a preventive maintenance program
- Use to troubleshoot in instances of poor system performance or excessive machine downtime
- Use to check performance on a production line
- Install EasyTest fittings on prototypes to accurately evaluate hydraulic performance at any stage of development

Pressure meter has low and high scale, and battery check.
Flow meter includes low and high scale, and temperature scale.
Auxiliary pressure output allows attachment to oscilloscope.
Three-position selector switches are easy to operate.

Load valve can generate 6000 psi.
9' cable connects sensor to TestMate®.
Captive sensor bolts cannot get lost.

NOTES:
Box 2. Required for any underground coal mining application. Unit will be furnished with the required MSHA tag.
## TestMate® Series

### Flow Meter
- **Type:** Electronic turbine
- **Low Scale Range:** 0 to 20 gpm (0 to 75.7 L/min)
- **Low Scale Accuracy:** ±1 gpm @ 3 to 5 gpm (11-19 L/min)
  
  ±0.2 gpm @ 6 to 20 gpm (22.7-75.7 L/min)
- **High Scale Range:** 0 to 100 gpm (0 to 378 L/min)
- **High Scale Accuracy:** ±2% of full scale
- **Minimum Reading:** 3 gpm (11.35 L/min)

### Pressure Meter
- **Type:** Electronic transducer
- **Low Scale Range:** 0 to 1000 psi (0 to 69 bar)
- **Low Scale Accuracy:** ±35 psi (2.41 bar)
- **High Scale Range:** 0 to 6000 psi (0 to 413.8 bar)
- **High Scale Accuracy:** ±120 psi (8.44 bar)

### Auxiliary Pressure Output:
- BNC connector - 2.5 mv @ 0.1mA per 1000 psi (68.96 bar), linear in the range 0 to 6000 psi (0 to 413.8 bar), independent of meter scale selection

### Temperature Scale:
- 50°F to 250°F (10°C to 121°C)

### Power Source:
- 8 “C” size batteries
- *To be furnished by customer*

### Weight:
- 18 lbs (8 kg)

### Case Dimensions:
- 19.87 x 13.93 x 4.68 in (50.4 x 35.4 x 11.9 cm)

### EasyTest Fitting Envelope Dimensions:
- 4.5 x 4 x 3 in (114 x 102 x 76 mm)

### Auxiliary Pressure Output:
- BNC connector - 2.5 mv @ 0.1mA per 1000 psi (68.96 bar), linear in the range 0 to 6000 psi (0 to 413.8 bar), independent of meter scale selection

### Temperature Scale:
- 50°F to 250°F (10°C to 121°C)

### Power Source:
- 8 “C” size batteries
- *To be furnished by customer*

### Weight:

The Schroeder Model HTB hydraulic test bench is the ultimate diagnostic tool, capable of thoroughly testing a vast array of new or rebuilt components and subassemblies prior to their installation in a working system. Test bench instrumentation has been designed to make diagnosis fast and accurate, with virtually no requirement for connecting external instruments. The bench panel includes a digital flow gauge, a tachometer to measure the speed of tested pumps or motors, and a reservoir temperature gauge. Individual gauges measure pressure on the test bench main pump, the pump or motor being tested, the test bench load pump, the cylinder and valve pressure port, and the test bench super charge pump.

Every HTB includes efficient Schroeder hydraulic filters to keep the bench oil at optimum cleanliness, providing assurance that newly rebuilt components will not be subjected to harmful levels of dirt. To keep filters operating at peak efficiency, the instrument panel includes a red pilot light that signals the operator when any bench filter needs a new element.

These benches have been refined for over 50 years by Schroeder engineers, based on the comments and requests of over 1,000 test bench owners. The versatile hydraulic circuitry present in each of the three models can shorten troubleshooting time and take the guesswork out of diagnoses. Current models are powerful, compact units that pay for themselves quickly in saved maintenance time and expenses.

**Features and Benefits**

- An ingenious universal mounting bracket makes mounting pumps and motors on the bench a simple, quick operation
- Mounting plates are furnished to accommodate flange-mounted and foot-mounted pumps or motors
- Drive adapter equipment includes inserts for keyed shafts, an insert chuck and a universal drive shaft
- Quick disconnect porting on the bench provides convenient hook-up for test components
- Two complete operating manuals are supplied with each bench
- Kits and spare parts available for upgrades and maintenance

**Description**

The Schroeder Model HTB hydraulic test bench is the ultimate diagnostic tool, capable of thoroughly testing a vast array of new or rebuilt components and subassemblies prior to their installation in a working system. Test bench instrumentation has been designed to make diagnosis fast and accurate, with virtually no requirement for connecting external instruments. The bench panel includes a digital flow gauge, a tachometer to measure the speed of tested pumps or motors, and a reservoir temperature gauge. Individual gauges measure pressure on the test bench main pump, the pump or motor being tested, the test bench load pump, the cylinder and valve pressure port, and the test bench super charge pump.

Every HTB includes efficient Schroeder hydraulic filters to keep the bench oil at optimum cleanliness, providing assurance that newly rebuilt components will not be subjected to harmful levels of dirt. To keep filters operating at peak efficiency, the instrument panel includes a red pilot light that signals the operator when any bench filter needs a new element.

These benches have been refined for over 50 years by Schroeder engineers, based on the comments and requests of over 1,000 test bench owners. The versatile hydraulic circuitry present in each of the three models can shorten troubleshooting time and take the guesswork out of diagnoses. Current models are powerful, compact units that pay for themselves quickly in saved maintenance time and expenses.

**Accessories**

- Suction and pressure hose and fittings group (contains hose connection with female quick disconnects on both ends, plus a series of separate national pipe thread, straight thread, and SAE four-bolt flange adapters, ranging in size from 3/8” through 2”, equipped with male quick disconnects)
- Oil cooler
- Solenoid and pilot-operated valve test group
- Spline shaft adapter kit
- Jib Crane Group
- Digital Instrumentation Package
- Water Cooled Heat Exchanger
- Filtration Group
- Safety Enclosure Group
- High Pressure Intensifier Circuit
- Bidirectional Pump Test Circuit
- HMG Digital Electronic Group
- Air Cooled Heat Exchanger
- 25 gpm Case Drain Meter
- TCM Kit

**Appendix**
Pumps and motors can be tested dynamically. Pump and motor testing is aided by the wide speed and torque ranges built into the bench and by the universal mounting bracket and mounting accessories that come with the bench. An open loop hydrostatic variable volume hydraulic system provides the power and speed control for the drive shaft. Motors can be dynamically tested, under load, for operating efficiency. Pumps can be tested for external leakage and volumetric efficiency in either direction, at speeds from 200 to 2400 rpm. The test bench can also be used to break-in pumps and motors to manufacturer's specifications before they are installed in a system.

**Cylinder** leaks are easy to find. Double-acting cylinders may be cycled, and tested for both internal and external leakage at any point of piston travel. Scored cylinder walls and defective packing are easily detected. Single-acting cylinders are tested at maximum stroke.

**Valve** testing time is minimized. Pressures can be set, external and internal leakage spotted, flow and pressure data can be generated and checked against operating requirements and overall valve efficiency determined. Optional electrical and pilot pressure supplies are available on the bench for testing solenoid-actuated and pilot-operated valves.
