Rolling Media Filtration

The Rolling Media Filter (RMF) provides a highly efficient and reliable means of removing solids from process liquids. This filter is a non pressurized system which is economical and easy to operate. It can handle occasional system upsets or overloads without blinding the filter media.

The RMF is a fully automatic system that ensures efficient cleaning of any process fluid. It optimizes the amount of media used at the same time. The solids are discharged as a cake for easy handling and disposal.

The liquid to be filtered is pumped or gravity fed into inlet. It is then distributed to the flood box, which slows the velocity and discharges the liquid over the entire width of the filter media. The liquid filters through the media, and the solids are left behind collecting on the filter media surface. The clean liquid is discharged through the outlet into a tank or discharged into an open system.

As the solids are collected on the filter media, the liquid level rises to a preset level. A level sensor initiates an index cycle and fresh media is indexed displacing a portion of the spent media. The media is then discharged to a waste container.

Rolling Media Filtration

Construction Material: Epoxy coated, Carbon steel
Conveyor Material: 304 stainless steel
Seal Wheels: Aluminum

How to Build a Valid Model Number for a Rolling Media Filtration:

- **BOX 1**: RMF
- **BOX 2**: Filter Size
  - 70 = 70 gpm
  - 145 = 145 gpm
  - 210 = 210 gpm
  - 275 = 275 gpm
  - 300 = 300 gpm
  - 350 = 350 gpm
  - 400 = 400 gpm
  - 500 = 500 gpm
  - 600 = 600 gpm
- **BOX 3**: Wheel Material
  - AL = Aluminum
  - SS = Stainless Steel
- **BOX 4**: Housing Material
  - CS = Carbon Steel
  - SS = Stainless Steel
- **BOX 5**: Wheel Seals
  - N = Neoprene
  - T = Teflon
- **BOX 6**: Options
  - O = None
  - C = Cover
  - M = Media Recovery System
  - D = Contamination Dryer

Example: NOTE: One option per box
RMF 70 AL CS N C = RMF70ALCSNC

How to Build a Valid Model Number for a Schroeder RMF Media:

- **BOX 1**: RMF
- **BOX 2**: Replacement Type
  - RM = Roll Media
- **BOX 3**: Micron Rating
  - 07 = 7 μm
  - 12 = 12 μm
  - 14 = 14 μm
  - 18 = 18 μm
  - 28 = 28 μm
  - 50 = 50 μm
  - 200 = 200 μm
- **BOX 4**: Roll Width
  - 27 = 27" Wide (BWC 70/145)
  - 39 = 39" Wide (BWC 210/300)
  - 51 = 51" Wide (BWC 400)
  - 60 = 60" Wide (BWC 500)
  - 70 = 70" Wide (BWC 600)

Example: NOTE: One option per box
RMF RM 07 27 = RMFRM0727
